

The background is a light beige color with a subtle grid pattern. Overlaid on this grid are various abstract line art elements in a dark blue color. These include wavy, flowing lines that resemble sound waves or liquid movement, as well as geometric shapes like circles, rectangles, and squares. Some of these shapes contain internal lines, such as a circle with a crosshair or a rectangle with vertical lines. In the center of the image, there is a stylized line drawing of a person's face, showing only the eyes and hair, which is partially obscured by the grid and other abstract elements.

Acustio™

Workspace that grows with you

We already have solutions **for your future office**

The future of office work is coming, and we are ready to welcome it. Acustio acoustic furniture answers all the most urgent needs of a modern workplace: **focus enhancement, maximum flexibility, sustainability and personalization-friendly design**. Our products facilitate developing working space one would like to come back to – an office evolving with you.

An office space that brings clarity of mind

We produce simple and agile solutions for interior acoustics. Acoustic comfort contributes immensely to our working performance, health and general well-being. This is why we aim at developing the right ambience for focus, creativity and relaxation using multi-purpose, sustainable and visually pleasing equipment.

An office you'd like to come back to

(and even relax in)

Acoustic comfort is one of the key factors in contemporary workspace design. Experiences of hybrid and remote work confirmed that minimizing noise interruptions and securing quiet zones is necessary in readjustment of office spaces to new conditions. **Over 70% office employees reported dissatisfaction with acoustic conditions at work, and as many as 42% were prone to “noise rage” due to noisy colleagues!** This needs to be fixed.

Right now, over 80% surveyed employees prefer a hybrid model, with at least one day of remote work available – and providing conditions as good as at the home office are a challenge for companies.

Our solutions provide a positive mindhack for focus and uninterrupted work thanks to effective absorption of unnecessary noise. Results: stress levels down, productivity, efficiency and satisfaction up.

Let your workspace

follow your evolution

The office of the near future must be flexible, adjusted to the working team – not the other way round. **We aim at designing impromptu creative spaces, quiet areas enabling maximum focus, zones for meetings and exchanges.** This is why we must offer the exact opposite of boring. **The key is agility: our product families can be easily applied in pre-existing spaces and thanks to a range of personalization options (resizing, mounting brackets).** Each family offers a range of shapes and sizes, which allows for near infinite number of combinations.

Sounds like **really nice design**

We believe in the power of senses. The leading material in all Acustio product families is **three-layer felt, made of natural, synthetic or combined wool** – sound-absorbing, pleasant to touch and easy in maintenance. **80 colours and 3 categories** allow for a lot of creative combinations. Depending on the product family, our solutions are open to various levels of customization - they come in complete sets or as particular furniture elements. Blend in or stand out – you decide.

Ready for long years of efficient work

Acustio products are easy to maintain, clean, undo and reinstall. Additional elements, such as feet, wheels or mounting solutions provide extra flexibility – such as turning a standing divider into a mobile one. In case of an office rearrangement or moving into a new place, they can be used again and again and serve you many years. We also care for health and hygiene – an absolute priority in contemporary office spaces. This is why we offer an enhancement of all our solutions with antibacterial and antifungal NanoFelt technology.

The future is flexible **and we know it**

In an efficient and friendly workplace, people can hear each other and their own thoughts clearly. The main lesson learned from remote work is that noise is more harmful to productivity, focus and enthusiasm than anyone expected. People enjoy working in spaces that let them get things done. And in order to get things done, we need to cut the noise.

We believe that the key to a workspace that works is to make it agile – and the right balance of sound and silence is a part of it. Our acoustic furniture facilitates remaking and remodeling your office whenever necessary – whether it means creating a screened-off space for maximum focus or shared collaborative space for free and quick idea exchange.

We are aware that various purposes mean various levels of acoustic comfort. That's why we develop flexible solutions for smooth workspace evolution and upgrade them with new, agility-maximizing elements. Enter the office of the future today.

Fasper

COMPREHENSIVE

RECOMMENDED FOR
open-plan offices

ENHANCEMENTS
free-standing dividers with dry-erase boards (furniture+creative solution in one),
wall lighting integrated with panels

Our most extensive and complex family, comprising a variety of functional products compatible with almost every kind of standard office furniture. Their versatility and classic design makes them a perfect choice for an innovative and user-friendly open-plan workspace. This arrangement is rarely associated with convenience due to noise levels, which teams often complain about. Jasper solutions can successfully balance it and turn an energy-draining office into a welcoming space of smooth collaboration.

FAMILY AWARDED WITH

Pro-tip:

The most noise-generating spaces in offices are meeting points, passageways and locations with facilities such as printers or coffee machines. We recommend separating them with preferred sound-absorbing solutions, which also clearly mark spaces off visually. Extras, such as lacobel dry-erase boards, can change a simple wall into a miniature collaborative space.

Heaven Booth

SPECIALIZED

Teamwork always means making buzz. Our answer is a system of super-versatile and highly efficient free-standing acoustic panels in various sizes, which can be arranged on the spot. Six layers of felt on connection points prevent any sound from escaping through the gaps. Let your ideas flow and be heard clearly.

Pro-tip:

While reducing noise significantly improves productivity and well-being at work, complete silence is not recommended either – for psychological reasons. We recommend maintaining a low but constant level of sound to provide ultimate acoustic comfort.

RECOMMENDED FOR

casual collaboration in open-plan offices, project rooms

ENHANCEMENTS

exchangeable feet and wheels, dry-erase boards

Basalt

SPECIALIZED

Bring more balance into your workspace – a calm mind is a creative one! This family of nature-inspired acoustic furniture brings a sense of balance into the office.

Pro-tip:

Panels placed on only one wall in the room won't improve acoustics. For a noticeable change mount them on at least two perpendicular walls. Not to mention the improved soundscape - it even looks cozier!

RECOMMENDED FOR

casual collaboration spaces,
social zones

ENHANCEMENTS

dry-erase boards matching the panel
size (easy connecting!)

lighting

Colline

SPECIALIZED

This award-winning product family combines brilliant sound-absorption ability with visual qualities. Designed for walls, they leave vast possibilities for individual arrangement – easy resizing, mounting and cutting makes them a perfect choice for large spaces as well as smaller compositions. Nature-inspired, mild forms add a sense of softness to any room, discreetly enhancing workspace well-being.

FAMILY AWARDED WITH

Pro-tip:

Wall-mounted panels are especially efficient between 120-240 cms above the floor level. This height matches our faces while we sit or stand.

RECOMMENDED FOR

project rooms

ENHANCEMENTS

metal slats and LED bars

tracks for sliding/removable boards and panels – mobile solutions for extra agility

open for a variety for new solutions, such as ceiling panels and free-standing dividers

Silentum

SPECIALIZED

RECOMMENDED FOR
management offices,
conference rooms, receptions

ENHANCEMENTS
wall and ceiling lighting

The Red Dot Award winning product family is designed with especially demanding spaces in mind. Sleek minimalist look goes hand in hand with extraordinary acoustic qualities – one single element from the Silentum family can absorb more noise than several other panels. This makes Silentum the perfect choice for prestigious spaces which require a level of privacy. Particular modules can be easily combined with each other.

FAMILY AWARDED WITH

reddot winner 2020
best of the best

awards

Pro-tip:

Room corners can be the weakest acoustic spot in the room as they generate echo. Silentum Pillar or Corner elements efficiently reduce it.
