

Dune panels assembly instructions

What you need:

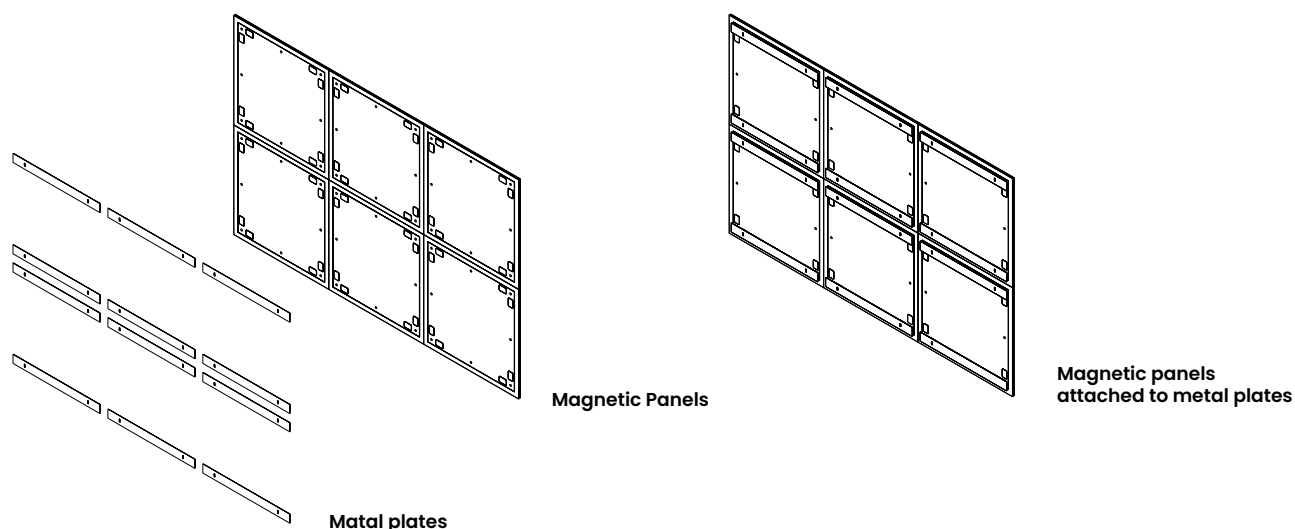

- Spirit level
- Drill
- Set of wall plugs and screws (head diameter 8–11 mm for a Ø6 mm hole, plugs suitable for your wall type; maximum allowed screw head height: 3.5 mm)
- Gloves
- Optional for easier installation: Acustio template, masking tape

Remember:

The wall surface should be flat, even, and free from any irregularities to ensure the panels fit perfectly together. Although the panels are mounted using magnets onto metal rails, any unevenness can lead to gaps or misalignment in your final composition.

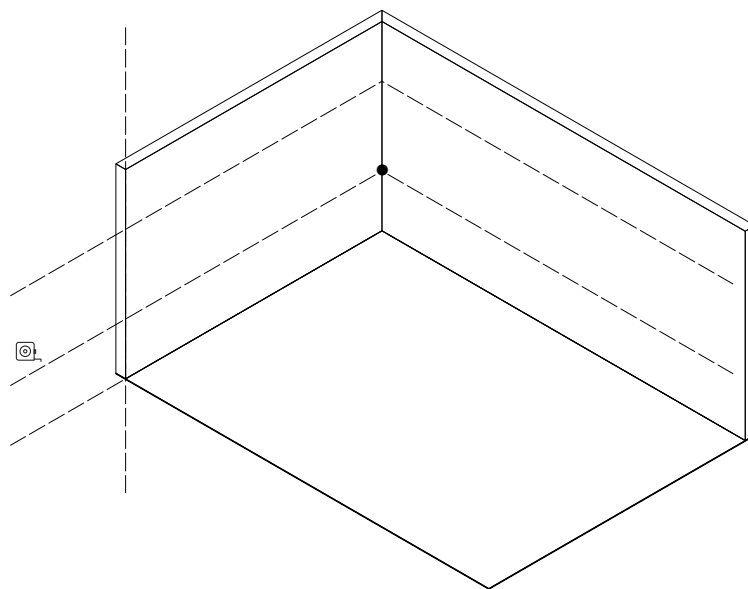

Panels with magnets and their mounting system:

The panels are attached to the wall using metal plates. Each panel includes two metal plates, which must be secured to the wall using appropriate mounting plugs and screws. The plates are specially prepared for this purpose. After attaching the plates to the wall, the panels are installed magnetically by attaching them directly to the metal plates. The panels can be freely rotated and rearranged to create your planned composition.

Begin installation

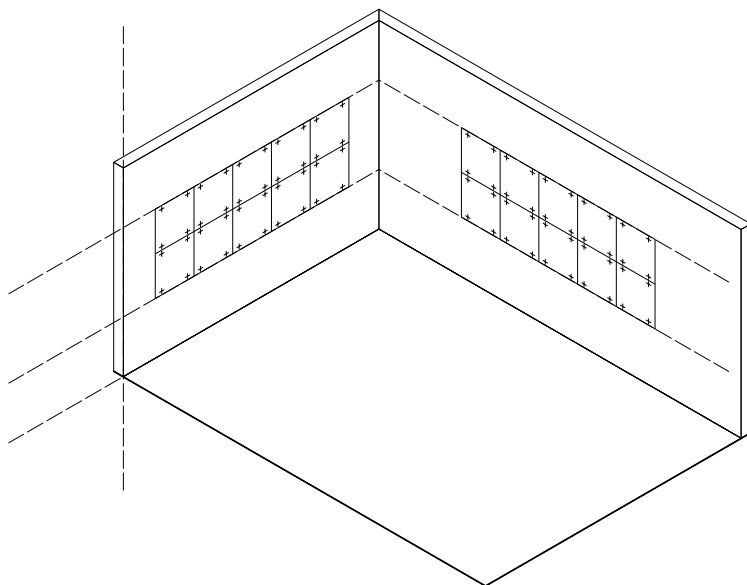

-  1. Mark a line in a place where the panels go using the level.

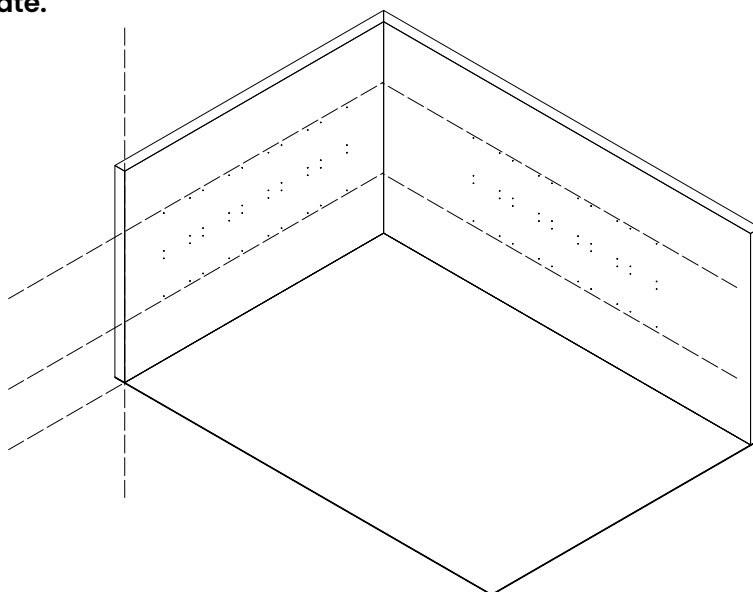

Dune panels assembly instructions

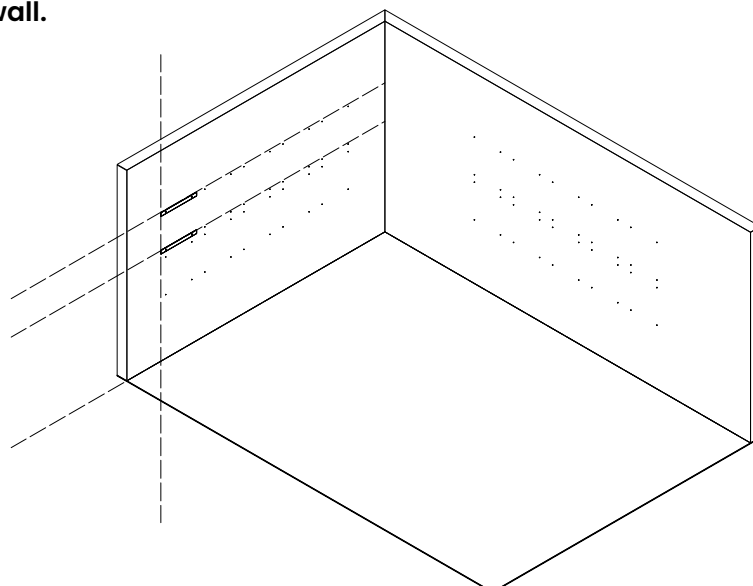

2. Attach the Acustio template to the wall using masking tape at the location where you want your composition to be placed.

- 3. Mark the drilling points by using a center punch at the cross marks indicated on the template.

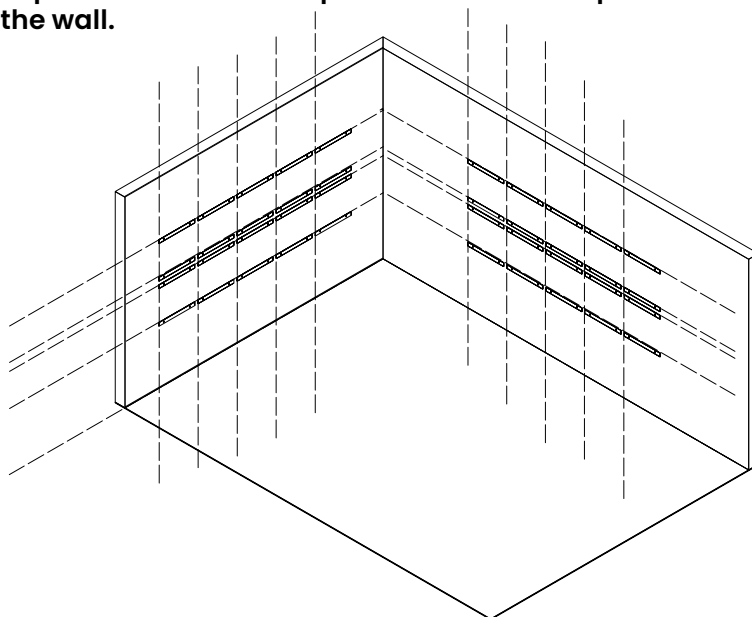

4. Using a laser level or spirit level, align the vertical and horizontal lines based on the marked points. Then drill holes for the wall plugs and attach the first metal plate to the wall.

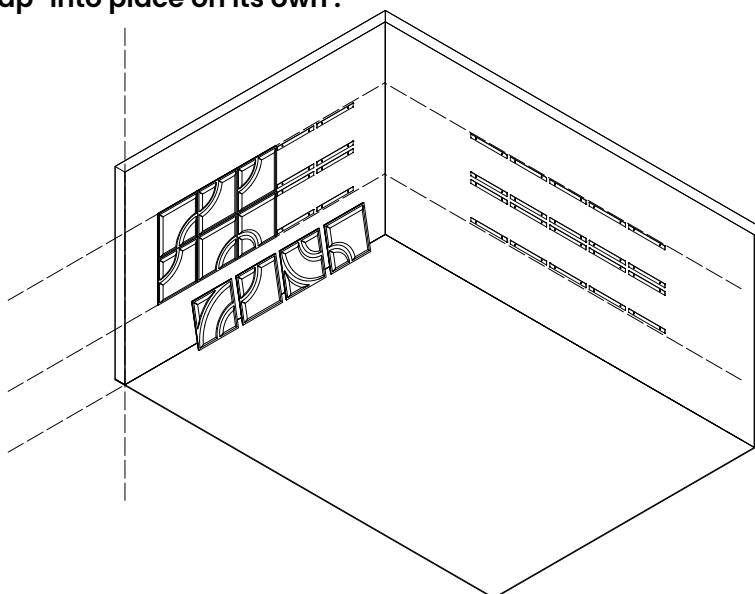

Dune panels assembly instructions

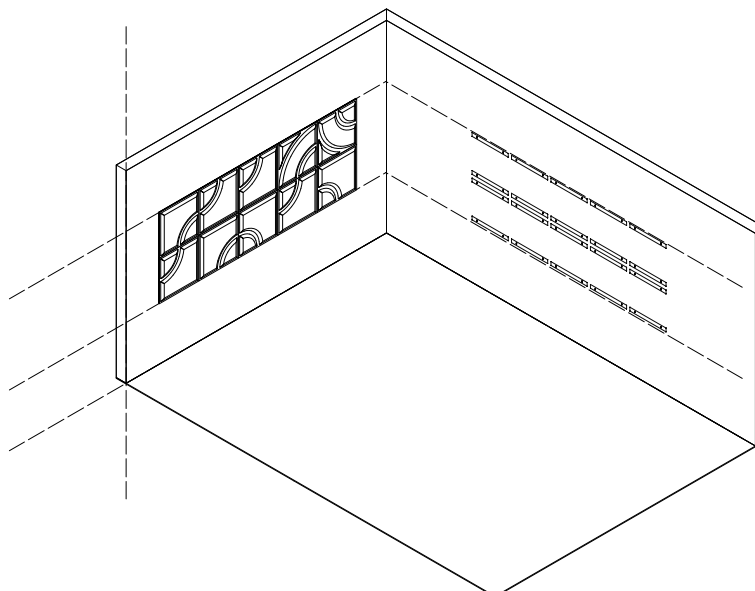

5. Repeat this process for all metal plates. Secure each plate in its designated position on the wall.

6. After all metal plates are securely mounted, attach your panels to the wall using the magnets. Simply place each panel over the corresponding metal plate — it will "snap" into place on its own.

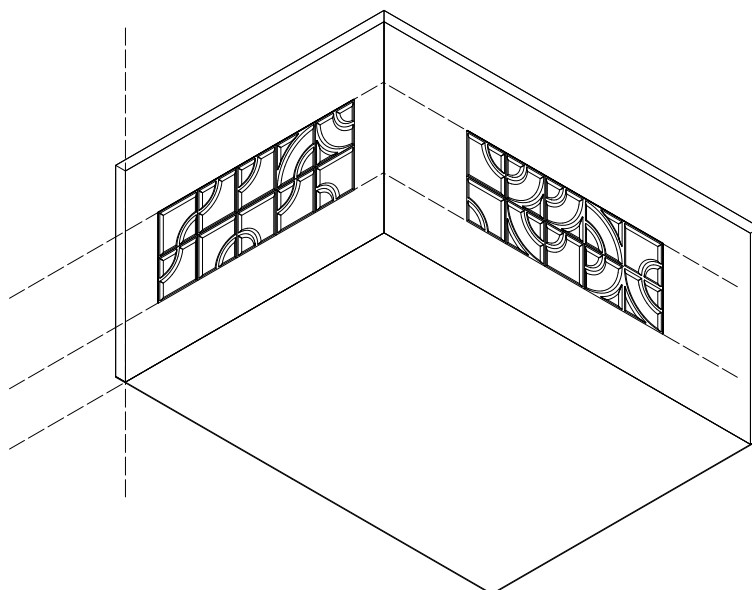

7. Place your panels one by one to build your composition. Don't worry — you can always change it later by rotating or rearranging the panels.

Dune panels assembly instructions

8. Great! Your composition is now complete :) and the easy installation is behind you.

9. Now it's time for the fun part :) Remember — the Dune composition can always be changed. By simply rotating the panels, you can give your composition — and your interior — a completely new look.
